

Table S1 Functional traits used for functional characterization of the bird

Trait types	Defined categories	References material
Beak.Length_Clumen	A. Continuous variables	
Beak.Length_Nares	B. Continuous variables	
Beak.Width	C. Continuous variables	[62]
Beak.Depth	D. Continuous variables	
Kipps.Distance	E. Continuous variables	
Wing length	F. Continuous variables	[63]
Tail length	G. Continuous variables	
Tarsus length	H. Continuous variables	[64]
Diet	I. Omnivorous J. Herbivorous K. Seed-feeding L. Insectivorous M. Carnivorous N. Frugivorous	[65]

Interpretation of trait indexes

The four indicators of the beak are: Length from the tip of the beak to the base of the shull (Beak.Length_Clumen), Length from the anterior edge of the nostrils to the tip of the beak (Beak.Length_Nares), Width of the beak at the anterior edge of the nostrils (Beak.Width), Width of the beak at the anterior edge of the nostrils (Beak.Depth). Kipp's distance is the length from the tip of the first secondary feather to the tip of the longest primary. Wing length, Tail length and Tarsus length take the mean of male and female individuals. We classified species into dietary guilds based on of diets for the world's bords, this trophic group was defined when its primary feeding group was >50%, when all trophic groups were ≤50%, both were included in the analysis if two were present, and omnivorous if three or more dietary guilds were present.

Table S2 Bird composition of different land use types

Order	Family	Species	Bird distribution in different land use types					
			PFL	AFL	TGL	ACK	APO	AMF
Galliformes	Phasianidae	<i>Alectoris magna</i> *	+	+	+			
		<i>Perdix daurica</i>	+		+			
		<i>Phasianus colchicus</i>	+	+	+	+	+	+
Columbiformes	Columbidae	<i>Columba rupestris</i>	+	+	+	+	+	
		<i>Streptopelia chinensis</i>	+	+				
Cuculiformes	Cuculidae	<i>Cuculus canorus</i>	+	+			+	
Caprimulgiformes	Apodidae	<i>Apus apus</i>						
Accipitriformes	Accipitridae	<i>Buteo hemilasius</i>						
		<i>Buteo japonicus</i>						
Strigiformes	Strigidae	<i>Bubo bubo</i>			+	+		+
		<i>Athene noctua</i>			+			
Bucerotiformes	Upupidae	<i>Upupa epops</i>	+	+		+		+
Piciformes	Picidae	<i>Dendrocopos major</i>	+	+				+
		<i>Picus canus</i>	+	+				+
Falconiformes	Falconidae	<i>Falco tinnunculus</i>						
Passeriformes	Oriolidae	<i>Oriolus chinensis</i>	+					
	Laniidae	<i>Lanius tephronotus</i>	+	+		+	+	+
	Corvidae	<i>Pica pica</i>	+	+	+			
		<i>Pyrrhocorax pyrrhocorax</i>	+	+	+	+	+	
		<i>Cyanopica cyanus</i>						
	Paridae	<i>Parus cinereus</i>	+	+		+	+	+
		<i>Pardaliparus venustulus</i> *						+
Remizidae	Remizidae	<i>Remiz coronatus</i>						+

Hirundinidae	<i>Hirundo rustica</i>						
Pycnonotidae	<i>Pycnonotus sinensis</i>						+
Phylloscopidae	<i>Phylloscopus armandii</i>			+			+
	<i>Phylloscopus trochiloides</i>						+
Aegithalidae	<i>Aegithalos glaucogularis</i>						+
Sylviidae	<i>Rhopophilus pekinensis</i>			+			
Leiothrichidae	<i>Garrulax davidi*</i>	+	+		+	+	+
Sittidae	<i>Tichodroma muraria</i>						
Sturnidae	<i>Spodiopsar cineraceus</i>	+					
Turdidae	<i>Turdus rubrocanus</i>	+	+				+
	<i>Zoothera aurea</i>						
Muscicapidae	<i>Phoenicurus ochruros</i>	+	+	+	+	+	
	<i>Phoenicurus auroreus</i>	+	+		+	+	+
	<i>Oenanthe isabellina</i>					+	
	<i>Oenanthe pleschanka</i>	+	+	+	+	+	
Passeridae	<i>Passer montanus</i>	+	+		+	+	
Motacillidae	<i>Motacilla alba</i>	+	+				
Fringillidae	<i>Pyrrhula erythaca</i>						+
	<i>Carpodacus pulcherrimus</i>					+	
	<i>Carpodacus stoliczake</i>			+			
	<i>Chloris sinica</i>	+				+	+
Emberizidae	<i>Emberiza godlewskii</i>	+	+	+	+		
	<i>Emberiza cioides</i>	+	+	+	+	+	

Note: *represents Chinese endemic species.

Table S3 Comparisons of different components of multidimensional β diversity in bird

Comparison	P-Value	Patterns
Taxonomic total dissimilarity vs. Functional total dissimilarity	$p < 0.001$	Taxonomic total dissimilarity < Functional total dissimilarity
Taxonomic total dissimilarity vs. Phylogenetic total dissimilarity	$p < 0.001$	Taxonomic total dissimilarity > Phylogenetic total dissimilarity
Functional total dissimilarity vs. Phylogenetic total dissimilarity	$p < 0.001$	Functional total dissimilarity > Phylogenetic total dissimilarity
Taxonomic turnover vs. Functional turnover	$p < 0.001$	Taxonomic turnover < Functional turnover
Taxonomic turnover vs. Phylogenetic turnover	$p < 0.001$	Taxonomic turnover > Phylogenetic turnover
Functional turnover vs. Phylogenetic turnover	$p < 0.001$	Functional turnover > Phylogenetic turnover
Taxonomic nestedness vs. Functional nestedness	$p < 0.001$	Taxonomic nestedness < Functional nestedness
Taxonomic nestedness vs. Phylogenetic nestedness	0.006	Taxonomic nestedness < Phylogenetic nestedness
Functional nestedness vs. Phylogenetic nestedness	$p < 0.001$	Functional nestedness > Phylogenetic nestedness
Taxonomic turnover vs. Taxonomic nestedness	$p < 0.001$	Taxonomic turnover > Taxonomic nestedness
Functional turnover vs. Functional nestedness	$p < 0.001$	Functional turnover > Functional nestedness
Phylogenetic turnover vs. Phylogenetic nestedness	$p < 0.001$	Phylogenetic turnover > Phylogenetic nestedness

Table S4 Composition of common plant species in different land use types

Land use types	Plant composition
